

3M 09550

Velcro-backed polishing pad 9550 3M is suitable for use with Fast Cut polishing agents from the 3M company, Perfect-it III series, as well as with other medium- and coarse-grained polishes. This is the hardest pad 3M with a diameter of 150 mm, recommended for use with polishing agents in the initial phase of polishing on lacquer surfaces which are not very susceptible. It removes scratches and tarnishes, improving the appearance and condition of the polished surface. Ideally suited for very hard old-style clear coats and SRC (Scratch Resistant) coats

There is also a smaller equivalent pad with a diameter of 75 mm and designation 50472.
